Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: This invention relates to accessing networks using communication devices.

The prior art in combination or alone fails to teach or suggest these elements of independent claims 1 and 8 in combination with other elements. For example independent claim 1 has claim limitations such as receiving a contact from the communication device, accessing the network based on commands received from the contact, and determining based on data return parameter in a user profile, the data return parameter including at least a parameter that indicates whether to deliver results of the commands immediately or at a latter time when the results become available, collecting portions of the results in a memory if results are to be delivered at a latter time, and delivering the results to the communication device. Independent claim 8 has claim limitation such as network interface, a user interface, a memory, and a controller coupled to the network interface and the memory, the controller receiving a contact from a communication device through the interface, accessing the network based on commands received from the communication device, wherein the controller determines, based on a data return parameter in a user profile, the data return parameter including at least a parameter that indicates whether to deliver results of the commands immediately or at a latter time, collects portions of the results in a memory if the results are to be delivered at a latter time, and delivers the results to the contact. For the above reasons independent claims 1, 8 and dependent claims 2-7, 9-15 are allowable.

2. Claims 1-15 are allowed.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

--(5,884,262) to Wise et al. discloses the computer documents audio access and conversion system which allows a user to access information originally formatted for audio/visual interfacing on a computer network via a simple telephone.

--(5,995,597) to Woltz et al. discloses email processing system and method in which an authorized user queries a user data profile and generates a series of e-mail messages and pager messages which are formatted and distributed based upon the user profile and data filtered from the incoming message.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
